

Chemical name	Cladribine	Natalizumab	Alemtuzumab
Indication	CIS, moderately and highly active* RRMS, active SPMS	CIS, moderately and highly active RRMS ,active SPMS	Highly active RRMS and active SPMS
Route of administration	 Oral	 Infusion	 Infusion
Dosage	<b>Year 1</b> 1 <sup>st</sup> weight-based course: maximum of 10 days of treatment <hr/> <b>Year 2</b> 2 <sup>nd</sup> weight-based course: maximum of 10 days of treatment (max of 20 days over 2 years)	<b>300 mg</b> every 4 weeks	<b>Year 1</b> 1 <sup>st</sup> course: <b>12 mg/day</b> on 5 consecutive days <hr/> <b>Year 2</b> 2 <sup>nd</sup> course: <b>12 mg/day</b> on 3 consecutive days
Pre-treatment screening	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>HIV</li> <li>Hepatitis serology panel</li> <li>VZV serology</li> <li>TB screen</li> <li>Serum pregnancy test (women of childbearing age)</li> </ul>	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>JCV serology</li> </ul>	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>Electrolytes</li> <li>Serum creatinine</li> <li>TSH</li> <li>VZV serology</li> <li>Hepatitis serology panel</li> <li>Urinalysis with microscopy</li> <li>TB screen</li> <li>HIV</li> <li>Serum pregnancy test (women of childbearing age)</li> </ul>
On-treatment monitoring	 Blood tests at 2 & 6 months, then every 6 months. No monitoring requirement after 3 years	 Blood test at 3 and 6 months then regular blood test every 6 months	 Regular blood & urine tests every month lasting four years after last infusion
Monitoring burden	 Low	 Low	 High
Relapse-related effectiveness	 High	 High	 High
Risk of infection	 Slightly increased risk of infection	 Slightly increased risk of infection	 Increased risk of infection
Vaccines	 Only inactivated vaccines. Possible for live attenuated vaccines when lymphocyte count is back to normal. No reduced vaccine efficacy	 Only inactivated vaccines	 Only inactivated vaccines. Possible for live attenuated vaccines after immune reconstitution
Pregnancy safety	<b>Not recommended</b> until 6 months after last tablet	Can be used until <b>30–34 weeks</b> of gestation with extended interval dosing (6–8 weeks)	<b>Not recommended</b> until 4 months after final infusion
Breastfeeding	 Not recommended. Can breastfeed 7 days after last tablet	 Can breastfeed 10–14 days after delivery	 Can breastfeed 10–14 days after delivery
Common side effects	<ul style="list-style-type: none"> <li>Moderate reduction of lymphocyte count (Reversible)</li> <li>Infections</li> </ul>	<ul style="list-style-type: none"> <li>Infusion reactions</li> <li>Headache</li> <li>Increased LFT</li> <li>Rarely PML</li> </ul>	<ul style="list-style-type: none"> <li>Infusion reactions</li> <li>Infections</li> <li>Autoimmune conditions mainly thyroid disorders</li> </ul>
Tolerability	 Well tolerated	 Well tolerated	 Well tolerated
Additional information	Protect from <b>moisture</b>	Store between <b>2 °C and 8 °C</b> Do NOT freeze	Store between <b>2 °C and 8 °C</b> Do NOT freeze

Chemical name	Fingolimod	Ocrelizumab	Ofatumumab
Indication	CIS, moderately and highly active RRMS	CIS, moderately and highly active RRMS, active SPMS, PPMS	CIS, moderately and highly active RRMS, active SPMS
Route of administration	 Oral	 Infusion	 Injection (SC)
Dosage	<b>0.5 mg</b> once daily	<b>600 mg</b> every 6 months	<b>20 mg</b> once per month
Pre-treatment screening	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>ECG</li> <li>LFTs</li> <li>VZV serology</li> <li>Ophthalmic exam/OCT</li> <li>Serum pregnancy test (women of childbearing age)</li> </ul>	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>Hepatitis serology panel</li> <li>Baseline IgG, IgM levels</li> </ul>	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>Hepatitis serology panel</li> <li>Baseline IgG, IgM levels</li> </ul>
On-treatment monitoring	 Blood tests at 3 & 6 months, then regular blood test every 6 months. Ophthalmic exam at 3 months	 Blood test every 6 months	 Blood test every 6 months
Monitoring burden	 Moderate	 Low	 Low
Relapse-related effectiveness	 Intermediate	 High	 High
Risk of infection	 Increased risk of infection	 Increased risk of infection	 Increased risk of infection
Vaccines	 Only inactivated vaccines	 Only inactivated vaccines with probable reduced vaccine efficacy	 Only inactivated vaccines with probable reduced vaccine efficacy
Pregnancy safety	<b>Not recommended</b>	<b>Pregnancy can be attempted</b> in the next menstrual cycle after the infusion	<b>May be</b> used until conception
Breastfeeding	 Not recommended	 Can breastfeed 10–14 days after delivery	 Can breastfeed 10–14 days after delivery
Common side effects	<ul style="list-style-type: none"> <li>Slow heart rate</li> <li>Cough</li> <li>Back pain</li> <li>Increased LFT</li> <li>Headache</li> <li>Diarrhea</li> <li>Infections</li> </ul>	<ul style="list-style-type: none"> <li>Infections</li> <li>Infusion reactions</li> <li>Hypogamma-globuli nemia</li> </ul>	<ul style="list-style-type: none"> <li>Injection site reactions</li> <li>Infections</li> </ul>
Tolerability	 Well tolerated	 Well tolerated	 Well tolerated
Additional information	Contains <b>beef gelatin</b>	Contains <b>mouse sequences</b> . Store between <b>2 °C and 8 °C</b> Do NOT freeze	Store between <b>2 °C and 8 °C</b> Do NOT freeze

# Disease Modifying Drugs

Comparing Treatments for Relapsing MS

Chemical name	Interferon β 1a	Interferon β 1b	Peginterferon β
Indication	CIS, moderately active RRMS	CIS, moderately active RRMS	CIS, moderately active RRMS
Route of administration	 Injection (IM/SC)	 Injection (SC)	 Injection (IM)
Dosage	<b>30 mcg</b> IM once a week or <b>44 mcg</b> SC three times per week	<b>250 mcg</b> SC every other day	<b>125 mcg</b> every 14 days
Pre-treatment screening	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>TSH</li> </ul>	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>TSH</li> </ul>	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>TSH</li> </ul>
On-treatment monitoring	 Blood test every 6 months	 Blood test every 6 months	 Blood test every 6 months
Monitoring burden	 Low	 Low	 Low
Relapse-related effectiveness	 Moderate	 Moderate	 Moderate
Risk of infection	 No	 No	 No
Vaccines	 Possible for live attenuated and inactivated vaccines	 Possible for live attenuated and inactivated vaccines	 Possible for live attenuated and inactivated vaccines
Pregnancy safety	<b>Safe</b> and given when benefit outweighs risk	<b>Safe</b> and given when benefit outweighs risk	<b>Safe</b> and given when benefit outweighs risk
Breastfeeding	 Yes	 Yes	 Yes
Common side effects	<ul style="list-style-type: none"> <li>Influenza-like symptoms</li> <li>Injection site reactions</li> <li>Headache</li> <li>Depression</li> </ul>	<ul style="list-style-type: none"> <li>Influenza-like symptoms</li> <li>Injection site reactions</li> <li>Headache</li> <li>Depression</li> </ul>	<ul style="list-style-type: none"> <li>Influenza-like symptoms</li> <li>Injection site reactions</li> <li>Headache</li> <li>Depression</li> </ul>
Tolerability	 Not well tolerated	 Not well tolerated	 Not well tolerated
Additional information	Store between 2 °C and 8 °C	Store at room temperature	Store between 2 °C and 8 °C

Chemical name	Glatiramer acetate	Teriflunomide	Dimethyl Fumarate
Indication	CIS, moderately active RRMS	CIS, moderately active RRMS	CIS, moderately active RRMS
Route of administration	 Injection (SC)	 Oral	 Oral
Dosage	<b>20 mg</b> every day	<b>14 mg</b> once daily	<b>240 mg</b> twice daily
Pre-treatment screening	No pre-treatment testing	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> <li>TB screen</li> <li>Serum pregnancy test (women of childbearing age)</li> </ul>	<ul style="list-style-type: none"> <li>CBC with differential</li> <li>LFTs</li> </ul>
On-treatment monitoring	 No routine monitoring	 Blood tests every 3–6 months	 Blood & urine test every 3–6 months
Monitoring burden	 Low	 Moderate	 Moderate
Relapse-related effectiveness	 Moderate	 Moderate	 Moderate
Risk of infection	 No	 Slightly increased risk of infection	 No
Vaccines	 Possible for live attenuated and inactivated vaccines	 Only inactivated vaccines	 Only inactivated vaccines
Pregnancy safety	<b>Safe</b> and given when benefit outweighs risk	<b>Contraindicated</b>	<b>May</b> be used until conception
Breastfeeding	 Yes	 Not recommended	 Not recommended
Common side effects	<ul style="list-style-type: none"> <li>Injection site reactions</li> <li>Headache</li> </ul>	<ul style="list-style-type: none"> <li>Nausea</li> <li>Abdominal pain</li> <li>Diarrhea</li> <li>Hair thinning</li> <li>Increased LFT</li> <li>Headache</li> </ul>	<ul style="list-style-type: none"> <li>Flushing</li> <li>Nausea</li> <li>Abdominal pain</li> <li>Diarrhea</li> </ul>
Tolerability	 Not well tolerated	 Well tolerated	 Not well tolerated
Additional information	Store between 2 °C and 8 °C	Contains <b>lactose</b>	Contains <b>beef gelatin</b>

### List of Abbreviations

- **CBC** – Complete blood count
- **CIS** – Clinically isolated syndrome
- **ECG** – Electrocardiogram
- **HIV** – Human immunodeficiency virus
- **IgG** – Immunoglobulin G
- **IgM** – Immunoglobulin M
- **IM** – Intramuscular
- **JCV** – John Cunningham virus
- **LFT** – Liver function test
- **OCT** – Optical coherence tomography
- **PML** – Progressive multifocal leukoencephalopathy
- **PPMS** – Primary progressive multiple sclerosis
- **SC** – Subcutaneous
- **SPMS** – Secondary progressive multiple sclerosis
- **TB** – Tuberculosis
- **TSH** – Thyroid stimulating hormone
- **VZV** – Varicella zoster virus

\*Defined as highly active disease despite a full and adequate course of treatmentwith at least one DMD or rapidly evolving severe RRMS(≥2 disabling relapses in 1 year, and with 1 or more gadolinium–enhancing lesionsor a significant increase in T2 lesion load as compared to a previous recent MRI)
